## Technology

The app was built in house using agile development practices utilizing a modern technology stack enabling rapid enhancement.

## OVERVIEW

The Providence mobile app gives consumers direct access to our services and digital solutions available in one unified mobile experience. Found in the [App Store](#) and [Google Play](#), the apps are our digital channel to build a direct, strong relationship with our patients and gain their loyalty.

The application enables patients to view their medical information, check symptoms, locate nearby clinics, make appointments, message their provider, view medical information, pay bills, and more—through a modern and modular user experience. With the recent addition of Single Sign on (SSO), and the power of advanced technologies like Artificial Intelligence (AI) and Machine Learning (ML), consumers can access and easily navigate relevant and personalized information and recommendations within or between episodes of care.

## ADDITIONAL INFORMATION

Download the application in the [App Store](#) or [Google Play](#)
